

The tapered rock augers are designed to drill in extreme rock conditions, the engineered design cutting system maximise penetrating abilities of the rotating pick tooth, the design enables the teeth to fracture the rock, allowing for penetration into ground normally unachievable with an auger.

Features:

- Heavy duty flighting
- Heavy duty centre shaft
- Rotating pick teeth and pilot
- Hard faced flight edges
- Australian made quality using superior materials

Ideal Uses:

Drilling through hard and fracturable rock, shale and heavy compacted ground

Machine Suitability:

Piling rigs, Excavators, large skid steers, digger derricks
